Company Overview

Far East Gold is an unlisted Australian public company with a high-quality portfolio of advanced and highly prospective copper-gold assets in Indonesia and Australia.

We have **offices in Jakarta and Brisbane** and field operations in Wonogiri, Trenggalek and Woyla.

30+ Indonesian Employees.

Proven Board

Far East Gold's Board of Directors have significant experience in developing businesses in Indonesia.

Collectively **the team has raised more than \$1 Billion AUD** for their other businesses as direct foreign investment for mining operations in Indonesia.

Indonesian Experience

The Far East Gold team has decades of experience in the Indonesian minerals, mining, oil and gas sectors.

As a team **we are committed to growing the Indonesian economy** and ensuring positive social and environmental impact.

Exciting Projects

Far East Gold has secured economic interest in three Indonesian projects and two Australian projects.

Far East Gold has plans to become a **significant player in the Asia Pacific gold mining sector**.

Conditional Share Purchase Agreement on 26 October 2020 for Far East Gold Ltd to acquire 100% economic interest in the Wonogiri Gold Project in Central Java.

The Wonogiri project is a **3,928-hectare** IUP Explorasi currently in voluntary suspension while FEG is securing the AMDAL and then upgrading to IUP-OP.

Exploration includes **19,775m drilling already completed** primarily focused on the Randu Kuning porphyry deposit.

Wonogiri has a JORC 2012 resource estimate of **1.15 million ounces AuEq.**

Infill Drill Targets identified and Drill Plan proposed.

Conditional Share Purchase Agreement on 10 June 2020 for Far East Gold to acquire 80% interest in the Woyla Gold Project in Aceh.

Diamond

The Woyla site is a **24,260-hectare 6th Generation Contract of Works** dated 17 March 1997 (amended 12 April 2017).

FEG is currently securing the necessary environmental and land use permits to enable advanced exploration activities to occur.

Gold

Project exploration to date has defined epithermal type Au-Ag mineralized vein systems.

Anak Perak is the largest known vein system in the Woyla Gold Project (10-50m wide by 1.8km to 2km in length)

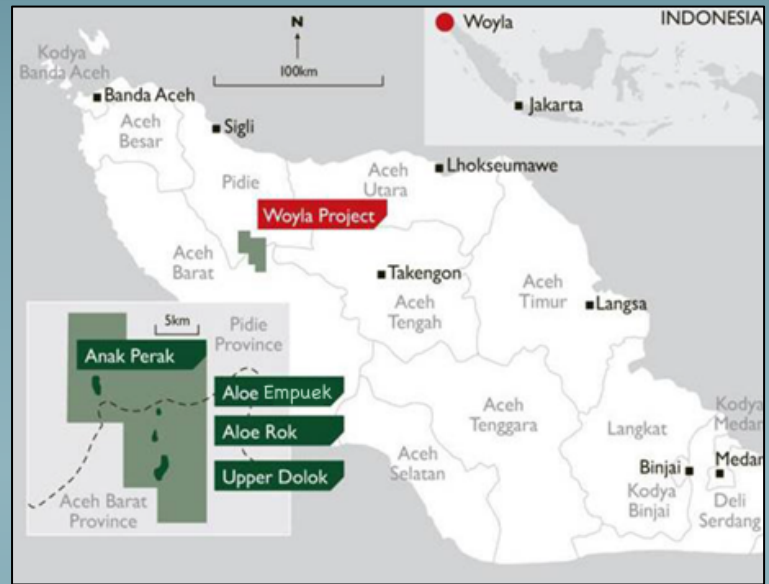

Previous assays and collective vein extents (5km) displaying a very large potential gold deposit.

Drill Targets identified and Drill Plan proposed.

Conditional Share Purchase Agreement on 10 May 2020 for Far East Gold to acquire 100% economic interest in the Trenggalek Gold-Copper Project in East Java.

The Trenggalek Gold-Copper Project is a **12,813 ha IUP OP** valid until June 2029 with a further 20 years extension potential.

Exploration includes **14,530m drilling already completed** by Arc Resources Ltd and Anglo American.

Porphyry and epithermal type mineralization identified. These include;

- Sentul Buluroto - Low sulphidation epithermal vein systems
- Singgahan & Jerambah - Porphyry type Au-Cu mineralization
- Sumber Bening - High-sulphidation type mineralization
- Bogoran & Timahan - Sediment-hosted gold mineralization

Drill Targets identified and Drill Plan proposed.

Hill 212

Far East Gold entered into an Earn-In Agreement effective from 9 October 2020 to acquire up to 90% of the Hill 212 project.

Hill 212 is a low sulphidation epithermal gold-silver deposit target with **over 2.5km of high-level epithermal veins and vein breccias**

Exploration includes **562m of drilling already completed** by Medusa Mining Ltd.

FEG has recently complete a new Spectral survey and detailed IP Resistivity testing.

Under the terms of the Earn-In Agreement Far East Gold aims to spend at least \$3,000,000 in exploration on the project before the end of 2023.

Vein and vein breccia samples with highly anomalous gold/silver at Hill 212

Mt Clark West

Far East Gold entered into an Earn-In Agreement effective from 9 October 2020 to acquire up to 90% of the Mount Clark West project.

Mount Clark West is a large geophysical anomaly, coincident with Cu-Mo-Au geochemistry, with outcropping high-level porphyry stockwork quartz veins.

Exploration includes **1,283m of drilling already completed** by Medusa Mining Ltd.

FEG is in the process of conducting detailed IP Resistivity testing.

Under the terms of the Earn-In Agreement Far East Gold aims to spend at least \$1,000,000 in exploration on the project before the end of 2023.

New Mining Law

Streamlined government interactions
Challenges in central government resourcing during transition

Are we comfortable?

Yes...
Reduces sovereign risk
Simplifies the compliance process

Issues of conducting business in Indonesia

Covid Restrictions
Length of administrative process
Lack of clarity of roles in new regime

How can it be improved?

Expedite issuing relevant regulations
Increase central government resource to address increased workload.

Wonogiri

2,400m in-fill diamond drill program to support detailed feasibility study and test for potential deposit extensions at depth once AMDAL and IUP-OP issued.

Aim is to increase the existing 1.15m oz AuEq JORC resource estimate through grade enhancement.

Continued exploration drilling of adjacent epithermal Au prospects.

Woyla

Detailed mapping of Anak Perak and Aloe Eumpeuk vein system to be ready for initial drilling once PIPB and IPPKH issued.

4,000m diamond-drill program to test Anak Perak vein system to advance to initial resource estimation.

Detailed mapping and geophysics to define drill targets on other vein systems and porphyry-type targets.

Trenggalek

3,500m resource definition drill program planned at Sentul-Buluroto once IPPKH issued.

Aim is to define JORC resource to facilitate operations with an experienced Joint Venture partner.

1,500m scout drilling at Singgahan porphyry target

Additional modelling on the 10 other prospects to define further drill programs
